From Principal's Desk

Dr. Ketan V. Shah

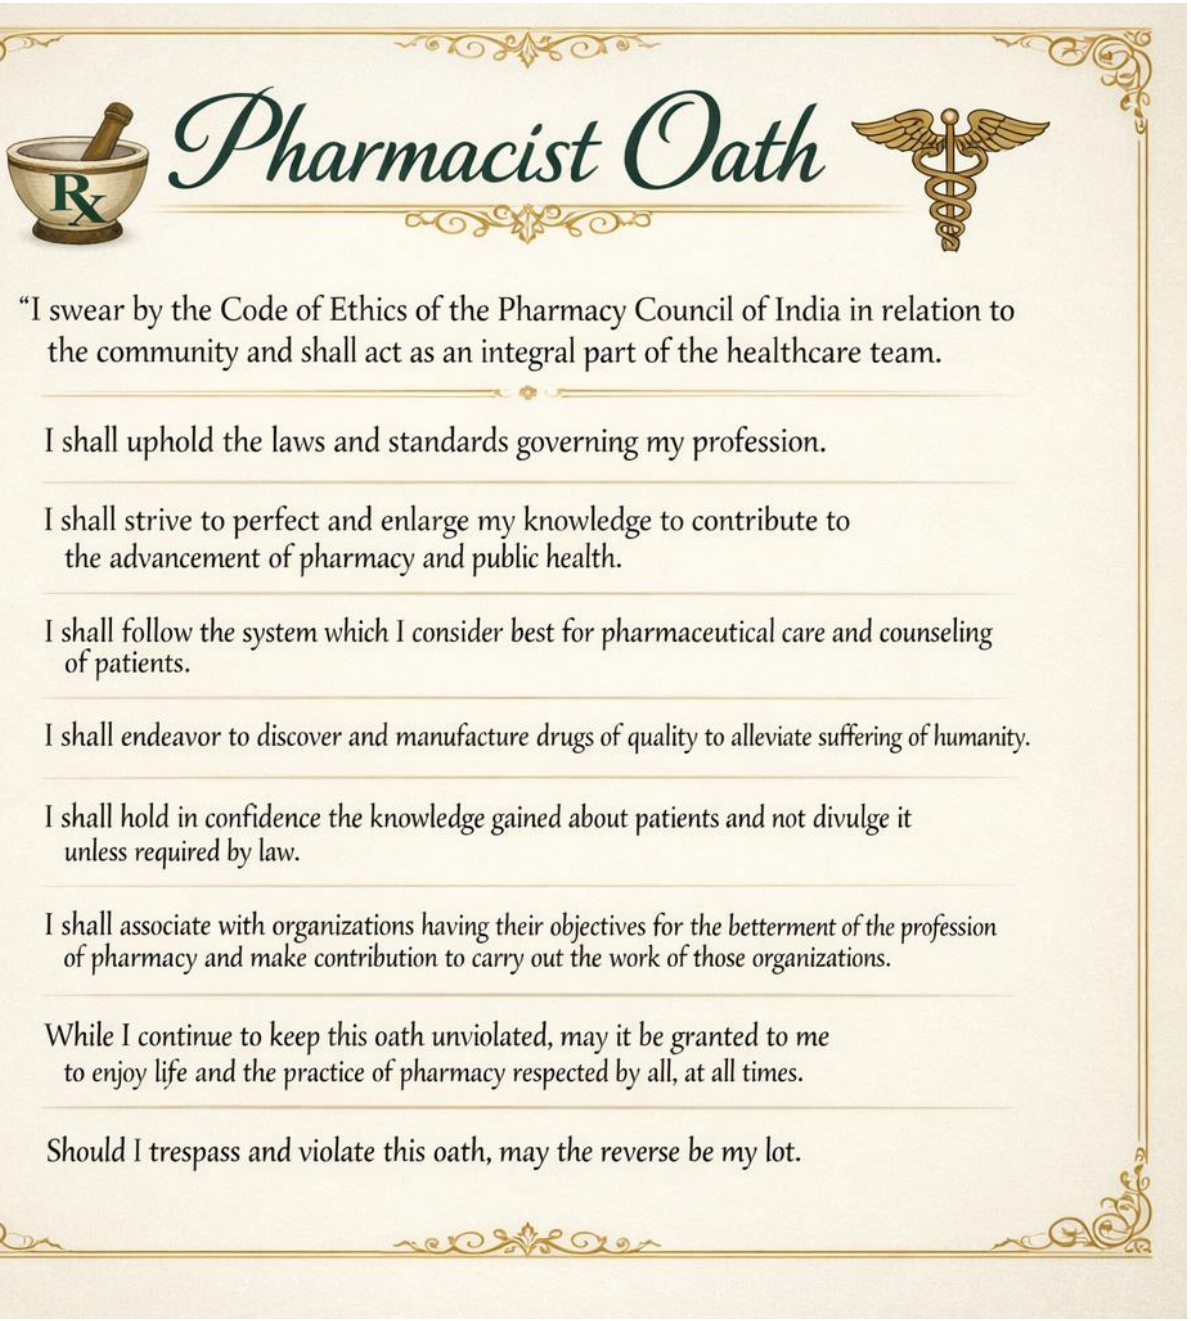

An essential component of society's overall development is education. There is little doubt that education plays a function beyond simply imparting and absorbing theory and knowledge. The real purpose of education goes much beyond merely giving students diplomas and degrees. "By education I mean an all-round drawing out of the best in child and man-body, mind and spirit," as Mahatma Gandhi once stated. The ultimate aim of education is to find the meaning of life and to fulfill oneself, as well as all of humanity. Knowledge, humanity, culture, wisdom, and sharpness are the goals of education; yet, it should be remembered that character is developed rather than given, and knowledge must be earned.

Shree Naranjibhai Lalbhai Patel College assists in the development of a student's personality, extracurricular activities, and overall worldview in addition to its theoretical education. We have all the qualities of a top-notch institution: a well-trained faculty, an extensive library, a placement office, innovative teaching strategies, and freedom to think and express oneself. The goal of higher education in rural areas is linked to employment because it guarantees a good attitude to view the world from a better perspective and to evaluate, identify, and apply a person's ideas in a way that contributes to the positive development of society. I genuinely think that there is more to our college than just education. It offers you an opportunity to develop by providing you with all the tools you need to succeed.

It is a matter of great pride and satisfaction for SNLPCP to bring out the magazine PHARMVIDYA. The college has made tremendous progress in all areas- academic, non- academics, capacity building relevant to staff and students. The College has achieved another milestone in getting NBA (National Board of Accreditation). I am confident that this issue of PHARMVIDYA will send a positive signal to the staff, students and the person who are interested in the technical education and Technology based activities. A magazine is like a mirror which reflects the clear picture of all sorts of activities undertaken by a department and develops writing skills among students in particular and teaching faculty in general. I congratulate the Editorial Board of this magazine who have played wonderful role in accomplishing the task in Record time.1

Advances in silica-based nanoparticles for targeting prostate cancer

3.1 Introduction

Prostate cancer (PC) is identified as the second most prevalent type of cancer in men and the fifth leading cause of cancer death worldwide [1]. Infections are a potential trigger for inflammation in prostate tissue [2]. When microbes are responsible for prostatitis, it lead to the generation of Reactive Oxygen Species (ROS)and inflammatory cytokines. These immune system mediators subsequently enhance cell proliferation and may take part in malignant growth [3]. This cancer type is often diagnosed in more than half of the world's countries (112 out of 185) [4]. Its occurrence rate shows significant variation between nations with high and low Human Development Index scores, with rates of 37.5 and 11.3 per 100,000 individuals, respectively [5]. Later, Fig. 3.1 outlines severity levels of PC, and depending on the cancer stage, conventional PC treatment approaches encompass surgical procedures, hormonal interventions, radiation-based therapies, cytotoxic drug regimens, and immune system-modulating strategies [6].

When cancer has progressed, hormone therapy is used either alone or in conjunction with surgery, chemotherapy, and radiation therapy to regulate the prostate cells' excessively active growth. In the later stages of cancer, hormone therapy, radical prostatectomy, and combination therapy are taken into consideration in addition to radiation and chemotherapy [7]. Strong radiation or harsh therapeutic agents are used in these treatments, neither of which has good control over precisely identifying cancer cells. Due to the destruction of healthy cells and tissues, this has serious side effects and creates significant obstacles to utilizing these treatments to their full potential for PC [8]. Over 90% of new oncology drugs fail to progress beyond clinical trials, primarily because they lack specificity for the intended disease site. This deficiency significantly diminishes their overall effectiveness and safety profile [9].

Abstract
Rheumatoid arthritis (RA) is a long-lasting ailment mostly disturbing joints and managed with disease-modifying antirheumatic drug (DMARDs), corticosteroids, and NSAIDs, along with immunosuppressants, though these cause serious adverse effects. *Citrus medica* L., known for anti-inflammatory, antioxidant, and immunostimulatory properties, was examined for the anti-arthritic activity of its hydroalcoholic extract (HAECF) in Freund's Complete Adjuvant (FCA)-induced RA rats. In this work, HAECF was prepared by using a soxhlet apparatus. Furthermore, HAECF was taken into consideration to analyze phytochemical constitutions. Experimental
